

United States Department of Agriculture.

BUREAU OF STATISTICS Circular No. 15.

U. S. DEPARTMENT OF AGRICULTURE,

BUREAU OF STATISTICS,

Washington, D. C., December 17, 1903.

SIR: I have the honor to transmit herewith a paper entitled "Foreign Trade in Farm and Forest Products, 1903," prepared by Mr. George K. Holmes, Chief of the Division of Foreign Markets, and to recommend its publication as Circular No. 15, of this Bureau.

Acknowledgment is due to the Chief of the Bureau of Statistics, Department of Commerce and Labor, for supplying some of the statistics in advance of publication by that Bureau, thus making it possible to publish this information much earlier than heretofore.

Very respectfully,

L. S. HOLMES, JR.,

Acting Statistician.

HON. JAMES WILSON,

Secretary of Agriculture.

FOREIGN TRADE IN FARM AND FOREST PRODUCTS, 1903.

DOMESTIC EXPORTS.

With a total value of \$878,479,451, the domestic exports of the farm products of this country reached a higher figure in the year ended June 30, 1903, than was ever before reached in one year, excepting 1901. This amount is larger than the average of the preceding five years by \$17,441,636, and higher than the average of the next preceding five years, 1893-1897, by \$262,404,501.

The products of the forest that went into domestic exports in the last fiscal year were valued at \$58,281,121, an amount larger than that of 1901 (the highest preceding year) by \$2,911,963, higher than the average of the five years 1898-1902 by \$10,632,591, and higher than the average of the preceding five years by \$26,498,196.

Upon combining the domestic exports of farm and forest products, the total for the last fiscal year is found to be \$936,760,575, which was exceeded only by the year 1901.

Of the total domestic exports, those of farm products during the last fiscal year constituted 63.4 per cent, or about the percentage of the preceding four years. The domestic exports of forest products are 4.2 per cent of the domestic exports of all products, and the combination of farm and forest products gives 67.3 per cent, or a little more than two-thirds of all the domestic exports of the country.

IMPORTS.

In the matter of imports, the fiscal year 1903 was a record year for farm products, their value being \$456,199,325, compared with which is the preceding five years' average, \$379,124,315, and the average of the next preceding five years, 1893-1897, which was \$391,166,925.

In forest products, too, the fiscal year 1903 was a record year for imports, their value being \$71,178,022, a large increase over the average of the preceding five years, \$55,205,996.

Taken together, the imports of farm and forest products during the last fiscal year were valued at \$527,577,347.

Of the total imports of the fiscal year 1903, 41.5 per cent were farm products, a smaller percentage than for any of the preceding ten years. The forest products constituted 7 per cent of the total imports, or a little under the percentage of the preceding five years. Upon combining the imports of farm and forest products, the percentage of total imports is 51.4, the lowest of the last eleven years.

EXCESS OF EXPORTS.

In consequence of the immense surplus of farm products above the consumption of this country, the domestic exports of these products exceeded the imports of the same class by \$122,280,126, a balance that was exceeded during every one of the five fiscal years 1898-1902. The balance is against this country in the trade in forest products, the adverse balance for the last fiscal year being \$13,196,898. The net balance of trade in favor of this country in farm and forest products combined amounted to \$409,083,228.

Relative quantities and balance of trade of imports and domestic exports of farm and forest products, 1893 to 1903.

THE FARMERS' BALANCE OF TRADE.

[Extract from the Report of the Secretary of Agriculture, 1903.]

The immense exports from the farms of the country lead to an examination of the so-called balance of trade. This examination reveals what seems to have escaped the attention of the public, and that is, that the favorable balance of trade, everything included, is due to the still more favorable balance of trade in the products of the farm.

During the thirteen years 1890-1902 the average annual excess of domestic exports over imports amounted to \$275,000,000, and during the same time the annual average in favor of farm products was \$337,000,000, from which it is apparent that there was an average annual adverse balance of trade in products other than those of the farm amounting to \$62,000,000, which the farmers offset and had left \$275,000,000 to the credit of themselves and the country.

Taking the business of 1903, the comparison is much more favorable to the farmers than during the preceding thirteen-year period, since the value of domestic exports

over imports was \$367,000,000, the entire trade being included, while the excess for farm products was \$422,000,000, which was sufficient not only to offset the unfavorable balance of trade of \$56,000,000 in products other than those of the farm, but to leave, as above stated, the enormous favorable balance of \$367,000,000.

During the last fourteen years there was a balance of trade in favor of farm products, without excepting any year, that amounted to \$4,896,000,000. Against this was an adverse balance of trade in products other than those of the farm of \$865,000,000, and the farmers not only canceled this immense obligation, but had enough left to place \$4,900,000,000 to the credit of the nation when the books of international exchange were balanced.

These figures tersely express the immense national reserve-sustaining power of the farmers of the country under present quantities of production. It is the farmers who have paid the foreign bondholders.

IMPORTANT IMPORTS.

The increased imports of farm products in 1903 over 1902 are more specially due to sugar and molasses, silk, tea, and wool; and the increase in imports of forest products is found chiefly in india rubber and various gums. By far the principal decrease in imports among the various classes is found in coffee, the amount of decrease being \$11,781,406.

PROMINENT CLASSES OF EXPORTS.

The detailed table of exports embraced in this circular has been condensed to prominent classes in the accompanying table. From an inspection of this condensed table, the more conspicuous increases and decreases of 1903 compared with 1902 may readily be noticed. Nearly the entire increase of exports of farm products is found in the exports of cotton, and considerable offsets to decreases are found in fruits and nuts, tobacco, and grain and grain products. The prominent decreases, in order of importance, were in meats and meat products, live animals, dairy products, and hay.
